

GENESIS
DISTRIBUTION CORP.

BUILDING A BETTER WORLD

ENGINEERING EXCELLENCE

Quality inspection occurs at over different 10 places/stages in the production line and the related data is captured in ERP

QUALITY MANAGEMENT SYSTEM

Providing excellent quality products to our customers has always been our driving fuel and passion. In order to do this, we need to always make sure our production capability remains at its peak where the output will be of the greatest quality. With an overall staff who bring in many years of experience, our QA process is guided by strong quality systems to ensure consistency in quality with continuous process improvement. We at Trinity Steel incorporate a culture of total quality management, which empowers every employee to be constantly vigilant in maintaining quality.

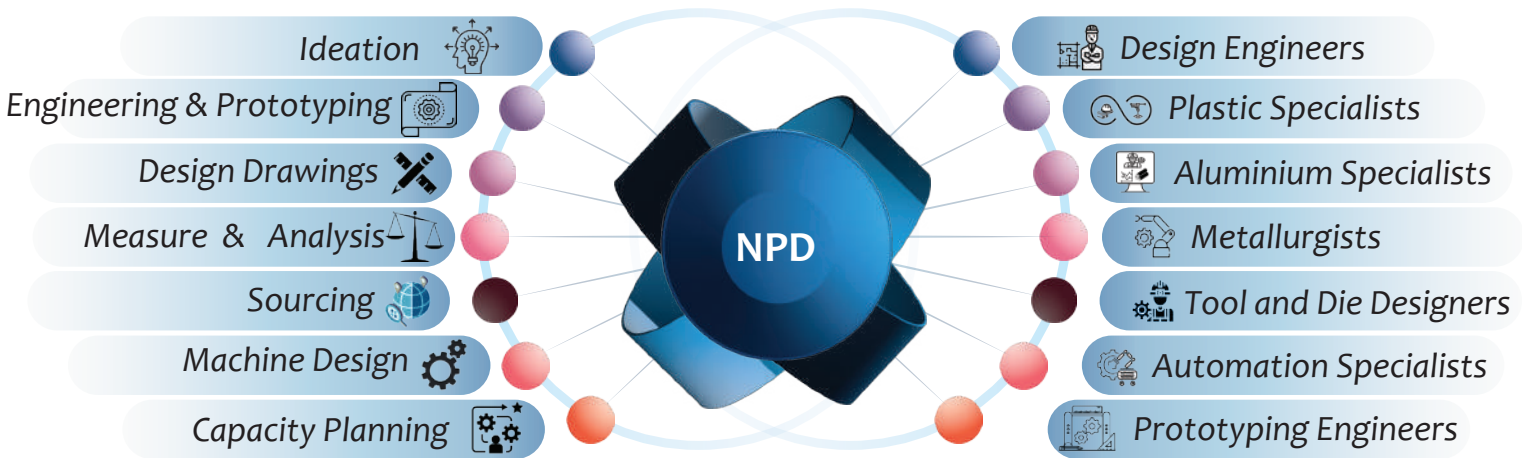

QI - Quality Inspection
PDI - Pre-Dispatch Inspection

NEW PRODUCT DEVELOPMENT

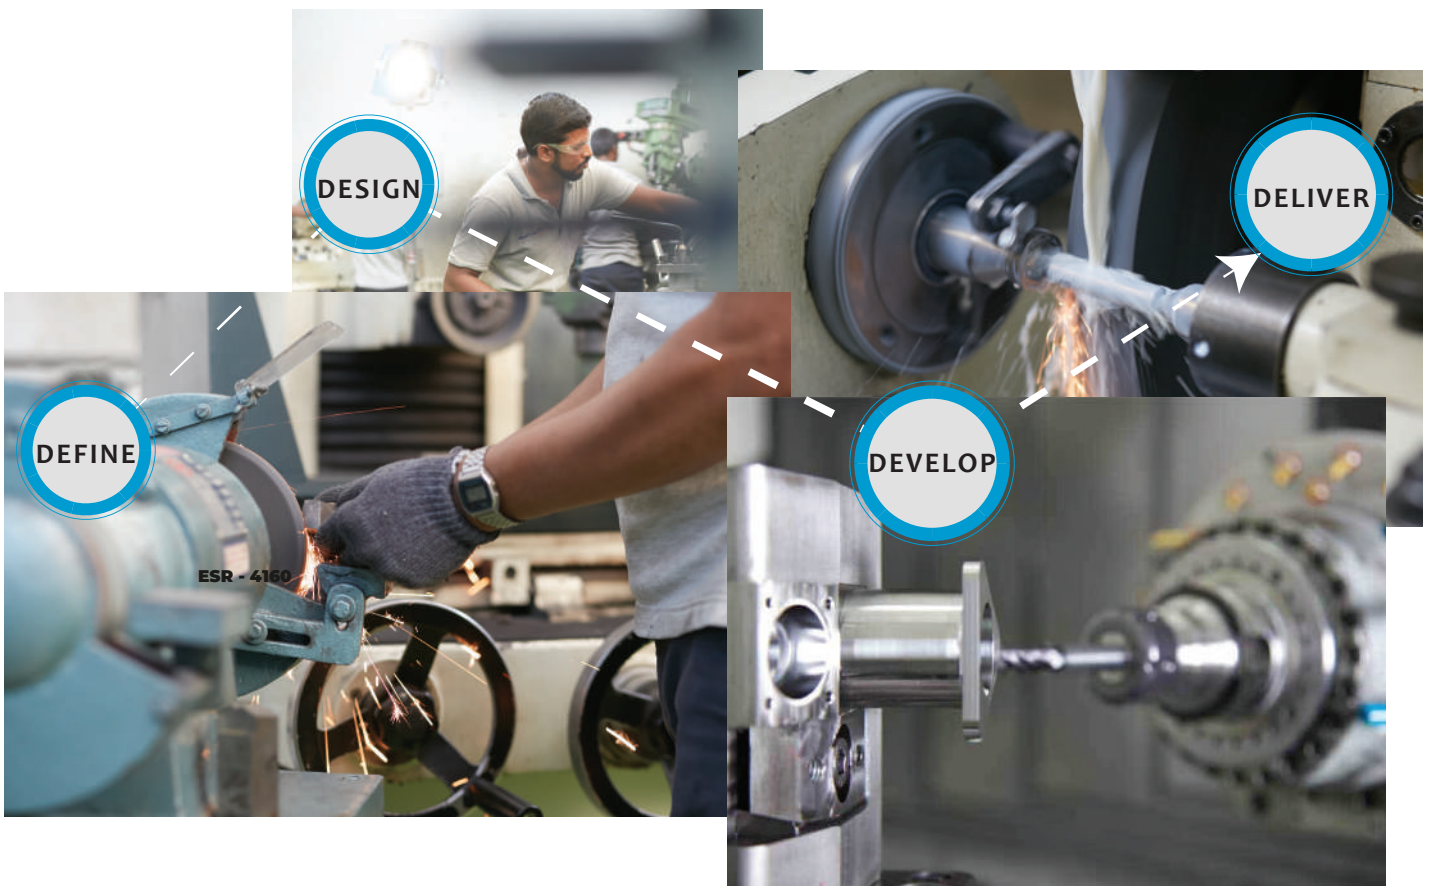

Our 25 member 'New Product Development' (NPD) team coupled with over 100 engineers and state of the art laboratories and machinery allow us to develop diverse products and for leading retailers and distributors globally.

ABOUT US

Genesis Distribution Corporation is a specialized manufacturer and distributor of specialized steel shelving and storage solutions and retail display racks which cater to the industrial and warehousing sectors, with a global clientele spanning across countries such as USA, UK, Canada, Australia, India, South Korea and the UAE.

We are a quality-centric organization that thrives on producing the best products for our clients and to the industry and ensuring that quality is our priority. We make this happen by maintaining a culture of continuous improvement and total quality management.

We take care of setting-up warehouse storage solutions in a fool-proof and safe manner and also extend post-installation maintenance services. After installing warehouse storage solutions, several add-ons and accessories may be required to upgrade existing storage systems. Our retrofit services aim to help you optimise your current storage systems to meet new requirements.

Our main focus is always on our customer and delivering efficient products which exceed expectations is our topmost priority. As much as we take pride in excellent production, we believe in the strength of an excellent and efficient delivery system.
